

UNDERSTANDING INFUSION THERAPY WITH TYSABRI® (natalizumab)

WHAT IS INFUSION THERAPY?

Depending on your medical history, this may be your first experience with an infusion. During an infusion, fluid flows from a sterile bag through plastic tubing and a small needle into a vein in your arm.

1-HOUR INFUSION, ONCE A MONTH

The actual infusion takes an hour. For your first 12 infusions, you'll be asked to stay for an additional hour of routine observation. After your 12th infusion, your healthcare provider may decide to shorten or skip the observation period.

GETTING INFUSED WITH TYSABRI STARTS WITH THE TOUCH PRESCRIBING PROGRAM

The TOUCH® Prescribing Program helps ensure that you and your healthcare team stay up to date on information regarding your treatment and monitor any new or worsening symptoms.

If you choose to treat your relapsing MS with TYSABRI, you will work with your healthcare provider to enroll in the TOUCH program by completing a Start Form.

What is TYSABRI® (natalizumab)?

TYSABRI is a prescription medicine used to treat relapsing forms of multiple sclerosis (MS), to include clinically isolated syndrome, relapsing-remitting disease, and active secondary progressive disease, in adults. TYSABRI increases the risk of progressive multifocal leukoencephalopathy (PML). When starting and continuing treatment with TYSABRI, it is important to discuss with your doctor whether the expected benefit of TYSABRI is enough to outweigh this risk.

SAFETY CONSIDERATIONS

TYSABRI increases your risk of getting a rare brain infection—called progressive multifocal leukoencephalopathy (PML)—that usually leads to death or severe disability. You can only get PML if you have been infected with the John Cunningham Virus (JCV).

Please see full [Prescribing Information](#), including **Boxed Warning** and [Medication Guide](#), as well as Important Safety Information on pages 3-4.

MAKE THE MOST OF YOUR INFUSION TIME

You can treat the infusion experience as “me time,” and you can spend your time doing things such as:

Read books
or magazines

Catch up
on your sleep

Listen to music

Play games

Work on
your laptop

Chat with
others

What you do before and after your infusion is up to you. Many TYSABRI fighters drive themselves to and from infusions, while others get a ride or bring someone along with them. Afterwards, some fighters choose to return to work and some rest for the remainder of the day. The choice is yours!

INFUSION CENTER STAFF ARE THERE FOR YOU

Before your infusion, the staff will check in with you. It’s important to share all of your medical conditions with your doctors and nurses. For example, if you:

- Have medical conditions that can weaken your immune system
- Have any new or worsening problems that have lasted several days
- Have had hives, itching, or trouble breathing during or after an infusion
- Have had a fever or infection
- Are pregnant, plan to become pregnant, are breastfeeding, or plan to breastfeed
- Are taking any other medications, including prescription and non-prescription medicines, vitamins, and herbal supplements

The Medication Guide can help you find more information regarding your infusion. If you have additional questions about TYSABRI, please contact your physician.

HOW CAN BIOGEN SUPPORT SERVICES HELP YOU?

Before your first infusion, a Support Coordinator will call you to:

- Make sure that all parties have received the necessary documentation, such as prescriptions, doctor’s orders, TYSABRI shipments, and/or authorizations
- Review your insurance coverage and help you with the initiation of financial and/or copay assistance if you are eligible
- Confirm the time and date for your first infusion at the center you’ve chosen
- Check with you to see that you’ve successfully started TYSABRI

If you still have questions about TYSABRI or what to expect prior to your first infusion, call a Biogen Support Coordinator at 1-800-456-2255.

Please see full [Prescribing Information](#), including **Boxed Warning** and [Medication Guide](#), as well as Important Safety Information on pages 3-4.

What is TYSABRI® (natalizumab)?

TYSABRI is a prescription medicine used to treat relapsing forms of multiple sclerosis (MS), to include clinically isolated syndrome, relapsing-remitting disease, and active secondary progressive disease, in adults. TYSABRI increases the risk of progressive multifocal leukoencephalopathy (PML). When starting and continuing treatment with TYSABRI, it is important to discuss with your doctor whether the expected benefit of TYSABRI is enough to outweigh this risk.

IMPORTANT SAFETY INFORMATION

What is the most important information I should know about TYSABRI?

TYSABRI increases your risk of getting a rare brain infection—called progressive multifocal leukoencephalopathy (PML)—that usually leads to death or severe disability.

- There is no known treatment, prevention, or cure for PML
- You should not take certain medicines that weaken your immune system at the same time you are taking TYSABRI. Even if you use TYSABRI alone to treat your MS, you can still get PML
- Your risk of getting PML is higher if you:
 - have been infected by the John Cunningham Virus (JCV). JCV is a common virus that can cause PML in people who have weakened immune systems, such as people taking TYSABRI. Before or while you receive TYSABRI, your doctor may do a blood test to check if you have been infected by JCV
 - have received TYSABRI for a long time, especially for longer than 2 years
 - have received certain medicines that can weaken your immune system before you start receiving TYSABRI
- Your risk of getting PML is greatest if you have all 3 risk factors listed above. There may be other risk factors that have not yet been identified
- Patients who are anti-JCV antibody negative are still at risk for the development of PML due to the potential for a new JCV infection or a false negative test result. Therefore, patients with a negative test result should be retested periodically
- While you receive TYSABRI, and for 6 months after you stop receiving TYSABRI, it is important that you call your doctor right away if you have any new or worsening medical problems (such as problems with your thinking, eyesight, balance, or strength; weakness on 1 side of your body; and using your arms and legs) that have lasted several days. Tell all of your doctors that you are getting treatment with TYSABRI
- Because of your risk of getting PML while you receive TYSABRI, TYSABRI is available only through a restricted distribution program called the TOUCH® Prescribing Program

Who should not receive TYSABRI?

Do not receive TYSABRI if you have PML or are allergic to natalizumab or any of the ingredients in TYSABRI.

What should I tell my doctor before receiving each dose of TYSABRI?

Before receiving TYSABRI, it is important to tell your doctor:

- If you have a medical condition that can weaken your immune system, such as HIV infection or AIDS, leukemia or lymphoma, organ transplant, or others, or if you have any new or worsening medical problems that have lasted several days
- If you are pregnant or plan to become pregnant. TYSABRI may cause low platelets, and in some cases also low red blood cells (anemia), in your newborn baby if you take TYSABRI while you are pregnant. It is not known if TYSABRI can cause birth defects

Important Safety Information continues on the next page.

IMPORTANT SAFETY INFORMATION (CONT'D)

- If you are breastfeeding or plan to breastfeed. TYSABRI can pass into your breast milk. It is not known if TYSABRI that passes into your breast milk can harm your baby. Talk to your doctor about the best way to feed your baby while you receive TYSABRI
- About all of the medicines and supplements you take, especially medicines that can weaken your immune system. If you are not sure, ask your doctor

What are the possible side effects of TYSABRI?

TYSABRI can cause serious side effects. If you have any of the symptoms listed below, call your doctor right away:

- **Herpes infections.** Increased risk of infection of the brain or the covering of your brain and spinal cord (encephalitis or meningitis) caused by herpes viruses that may lead to death. Symptoms include sudden fever, severe headache, or confusion. Infection of the eye caused by herpes viruses leading to blindness in some patients has occurred. Call your doctor if you have changes in vision, redness, or eye pain
- **Liver damage.** Symptoms include yellowing of the skin and eyes (jaundice), unusual darkening of the urine, nausea, feeling tired or weak, or vomiting
- **Allergic reactions (e.g., hives, itching, trouble breathing, chest pain, dizziness, wheezing, chills, rash, nausea, flushing of skin, low blood pressure), including serious allergic reactions (e.g., anaphylaxis).** Serious allergic reactions usually happen within 2 hours of the start of the infusion, but they can happen any time after receiving TYSABRI
- **Weakened immune system.** TYSABRI may increase your risk of getting an unusual or serious infection
- **Low platelet counts.** TYSABRI may cause the number of platelets in your blood to be reduced. Symptoms include easy bruising, small scattered spots on your skin that are red, pink or purple, heavier menstrual periods than are normal, bleeding from your gums or nose that is new or takes longer than usual to stop, or bleeding from a cut that is hard to stop

The most common side effects of TYSABRI are:

- Headache, feeling tired, urinary tract infection, joint pain, lung infection, depression, pain in your arms or legs, diarrhea, vaginitis, rash, nose and throat infections, nausea, stomach area pain. If you experience any side effect that bothers you or does not go away, tell your doctor

These are not all of the possible side effects of TYSABRI. For more information, ask your doctor. **To report side effects to FDA, please call 1-800-FDA-1088.**

Please see full [Prescribing Information](#), including **Boxed Warning** and [Medication Guide](#).

This information does not take the place of talking with your doctor about your medical condition or your treatment.

MEDICATION GUIDE

TYSABRI® (tie-SA-bree)
(natalizumab)

injection, for intravenous use

Read this Medication Guide before you start receiving TYSABRI and before you receive each dose. There may be new information. This Medication Guide does not take the place of talking to your doctor about your medical condition or your treatment.

What is the most important information I should know about TYSABRI?

- **TYSABRI increases your chance (risk) of getting a rare brain infection that usually leads to death or severe disability. This infection is called progressive multifocal leukoencephalopathy (PML). If PML happens, it usually happens in people with weakened immune systems.**
 - There is no known treatment, prevention, or cure for PML.
 - Your chance of getting PML may be higher if you are also being treated with other medicines that can weaken your immune system, including other treatments for Multiple Sclerosis (MS) and Crohn's disease (CD). You should not take certain medicines that weaken your immune system at the same time you are taking TYSABRI. Even if you use TYSABRI alone to treat your MS or CD, you can still get PML.
 - Your risk of getting PML is higher if you:
 - have been infected by the John Cunningham Virus (JCV). JCV is a common virus that is harmless in most people but can cause PML in people who have weakened immune systems, such as people taking TYSABRI. Most people who are infected by JCV do not know it or do not have any symptoms. This infection usually happens in childhood. Before you start receiving TYSABRI or during your treatment, your doctor may do a blood test to check if you have been infected by JCV.
 - have received TYSABRI for a long time, especially longer than 2 years
 - have received certain medicines that can weaken your immune system before you start receiving TYSABRI
- **Your risk of getting PML is greatest if you have all 3 risk factors listed above. There may be other risk factors for getting PML during TYSABRI treatment that we do not know about yet. Your doctor should discuss the risks and benefits of TYSABRI treatment with you before you decide to receive TYSABRI. See "What are the possible side effects of TYSABRI?"**
- **While you receive TYSABRI, and for 6 months after you stop receiving TYSABRI, it is important that you call your doctor right away if you have any new or worsening medical problems that have lasted several days.** These may be new or sudden and include problems with:
 - thinking
 - eyesight
 - strength
 - balance
 - weakness on 1 side of your body
 - using your arms and legs

Tell all your doctors that you are receiving TYSABRI.

- **Because of your risk of getting PML while you receive TYSABRI, TYSABRI is available only through a restricted distribution program called the TOUCH® Prescribing Program.** To receive TYSABRI, you must talk to your doctor and understand the risks and benefits of TYSABRI and agree to follow all of the instructions in the TOUCH® Prescribing Program.
 - **TYSABRI is only:**
 - prescribed by doctors who are enrolled in the TOUCH® Prescribing Program
 - given at an infusion center that is enrolled in the TOUCH® Prescribing Program
 - given to people who are enrolled in the TOUCH® Prescribing Program
 - **Before you receive TYSABRI, your doctor will:**
 - explain the TOUCH® Prescribing Program to you
 - have you sign the TOUCH® Prescriber and Patient Enrollment Form

What is TYSABRI?

TYSABRI is a prescription medicine used to treat adults with:

- relapsing forms of Multiple Sclerosis (MS), to include clinically isolated syndrome, relapsing-remitting disease and active secondary progressive disease. TYSABRI increases the risk of PML. When starting and continuing treatment with TYSABRI, it is important that you discuss with your doctor whether the expected benefit of TYSABRI is enough to outweigh this risk. See "What is the most important information I should know about TYSABRI?"
- moderate to severe Crohn's disease (CD). TYSABRI is used:
 - to reduce signs and symptoms of CD
 - in people who have not been helped enough by, or cannot use the usual CD medicines and medicines called tumor necrosis factor (TNF) inhibitors.
- It is not known if TYSABRI is safe and effective in children under 18 years of age.

Who should not receive TYSABRI?

Do not receive TYSABRI if you:

- have PML
- are allergic to natalizumab or any of the ingredients in TYSABRI. See the end of this Medication Guide for a complete list of ingredients in TYSABRI.

Talk to your doctor before receiving TYSABRI if you have any of these conditions.

What should I tell my doctor before receiving each dose of TYSABRI?

Before you receive TYSABRI, tell your doctor if you:

- have medical conditions that can weaken your immune system, including:
 - HIV infection or AIDS
 - leukemia or lymphoma
 - an organ transplant
 - other medical conditions that can weaken your immune system
- have any new or worsening medical problems that have lasted several days. These may be new or sudden and include problems with:
 - thinking
 - eyesight
 - balance
 - strength
 - weakness on 1 side of your body
 - using your arms and legs
- have had hives, itching or trouble breathing during or after receiving a dose of TYSABRI
- have a fever or infection (including shingles or any unusually long lasting infection)
- are pregnant or plan to become pregnant. TYSABRI may cause low platelets, and in some cases also low red blood cells (anemia), in your newborn baby if you take TYSABRI while you are pregnant. It is not known if TYSABRI can cause birth defects.
- are breastfeeding or plan to breastfeed. TYSABRI can pass into your breast milk. It is not known if the TYSABRI that passes into your breast milk can harm your baby. Talk to your doctor about the best way to feed your baby while you receive TYSABRI.

Tell your doctor about all the medicines you take, including prescription and over-the-counter medicines, vitamins and herbal supplements. Especially tell your doctor if you take medicines that can weaken your immune system. Ask your doctor if you are not sure.

Know the medicines you take. Keep a list of them to show your doctor and pharmacist when you get a new medicine.

How should I receive TYSABRI?

- TYSABRI is given 1 time every 4 weeks through a needle placed in your vein (IV infusion).
- Before each TYSABRI dose you will be asked questions to make sure TYSABRI is still right for you.

What are the possible side effects of TYSABRI?

TYSABRI may cause serious side effects, including:

- **See “What is the most important information I should know about TYSABRI?”**
- **Herpes Infections.** TYSABRI may increase your risk of getting an infection of the brain or the covering of your brain and spinal cord (encephalitis or meningitis) caused by herpes viruses that may lead to death. Call your doctor right away if you have sudden fever, severe headache, or if you feel confused after receiving TYSABRI. Herpes infections of the eye, causing blindness in some patients, have also occurred. Call your doctor right away if you have changes in vision, eye redness, or eye pain.
- **Liver damage.** Symptoms of liver damage can include:
 - yellowing of the skin and eyes (jaundice)
 - nausea
 - vomiting
 - unusual darkening of the urine
 - feeling tired or weak

Call your doctor right away if you have symptoms of liver damage. Your doctor can do blood tests to check for liver damage.

- **Allergic reactions, including serious allergic reactions.** Symptoms of an allergic reaction can include:
 - hives
 - itching
 - trouble breathing
 - chest pain
 - dizziness
 - wheezing
 - chills
 - rash
 - nausea
 - flushing of skin
 - low blood pressure

Serious allergic reactions usually happen within 2 hours of the start of your infusion, but they can happen at any time after you receive TYSABRI.

Tell your doctor right away if you have any symptom of an allergic reaction, even if it happens after you leave the infusion center. You may need treatment if you are having an allergic reaction.

- **Infections.** TYSABRI may increase your chance of getting an unusual or serious infection because TYSABRI can weaken your immune system. You have a higher risk of getting infections if you also take other medicines that can weaken your immune system.
- **Low platelet counts.** TYSABRI may cause the number of platelets in your blood to be reduced. Call your healthcare provider if you have any of the following symptoms:
 - easy bruising
 - heavier menstrual periods than are normal
 - bleeding from your gums or nose that is new or takes longer than usual to stop
 - bleeding from a cut that is hard to stop
 - small scattered red spots on your skin that are red, pink, or purple

The most common side effects of TYSABRI include:

- vaginitis
- rash
- nose and throat infections
- nausea
- stomach area pain

Tell your doctor about any side effect that bothers you or that does not go away.

These are not all the possible side effects of TYSABRI. Ask your doctor for more information.

Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.

General information about the safe and effective use of TYSABRI.

Medicines are sometimes prescribed for purposes other than those listed in a Medication Guide.

This Medication Guide summarizes the most important information about TYSABRI. If you would like more information, talk with your doctor. You can ask your pharmacist or doctor for information about TYSABRI that is written for healthcare professionals.

For more information, go to www.TYSABRI.com or call 1-800-456-2255.

What are the ingredients in TYSABRI?

Active ingredient: natalizumab

Inactive Ingredients: sodium chloride, sodium phosphate, monobasic, monohydrate; sodium phosphate, dibasic, heptahydrate; polysorbate 80, and water for injection

Manufactured by: Biogen Inc.; Cambridge, MA 02142 USA

This Medication Guide has been approved by the U.S. Food and Drug Administration.

Revised 12/2021
